

WILD BLUE OPTIMIZER

As part of your WildBlue service with CedarVision, Inc., you have access to the WildBlue Optimizer, which allows Web pages to load more quickly.

It also enables Auto-Detection for Internet Explorer and Firefox so that these Web browsers will recognize the WildBlue proxy server.

The WildBlue Optimizer changes key settings on your computer's Internet Explorer and Firefox browsers to optimize the Web surfing experience on WildBlue.

To download the WildBlue Optimizer, open a Web browser and type in the URL <http://www.trueband.net/optimizer/nrtc.zip>. The download is quick and should only take a few seconds.

Note: To download the software, you must have PC administrative permission for your computer. If you have a network of computers connected to your WildBlue account, you should download the Optimizer to each computer.

If you use a web accelerator or other software that sets a proxy, it may interfere with the WildBlue Optimizer. If for any reason you would like to remove the WildBlue Optimizer from your computer, go to the "Add/Remove Programs" menu at the Control Panel to delete it.

For additional help with the WildBlue Optimizer, contact our toll-free support line at 1-888-817-6873.

Thank you very much for subscribing to WildBlue. We hope you enjoy the service.
